

# Upgrade 10798

## Drive Air Scavenging Set

### SOLUTION TO KEEP YOUR VISATRON OIL MIST DETECTOR OPTICAL TRACK CLEAN

The environment around the engine can sometimes be tough, feeding the oil mist detector measuring chamber with contaminated air.

To minimize maintenance frequency and maximize operation reliability Schaller Automation recommends the installation of UPGRADE 10798 – a system which delivers clean filtered air straight from the pressurized air system to the measuring chamber. As a result, your measuring head filters and lenses will stay cleaner, longer.

Reduces maintenance frequency

Increases system reliability

Quick and easy installation
